date signature

available knob

standard black hexagonal knob

optional anodised round knob ☐ black hidden knob ☐

***Production standard** The standard size of the blind is given by the height of the glass less 24 mm and from the width of the glass less 28 mm (secondary sealant: control side 8 mm; other sides: 4 mm; spacer bar 8 mm).

Only fill in the secondary sealant depth (i.e. 6 mm) column in case you use a different sealing thickness; the sizes of the blind ordered will be changed to fit our own production requirements.
